

Managed Vblock.

The benefits of private cloud, for a predictable monthly fee.

A Vblock is a new way of delivering IT, providing a rapid deployment model for virtualised infrastructure. Logicalis' Managed Vblock extends this further, delivering a private cloud for a fixed monthly fee, including migration and management. Managed Vblock eliminates CapEx and operational risk, and improves operational efficiency. More importantly, Managed Vblock enables customers to focus on their business – not on technology.

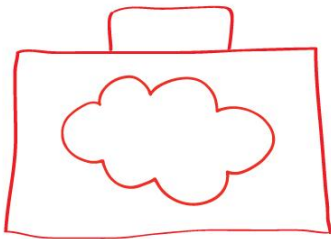

Cloud computing is experiencing rapid growth and “C-level mindshare” for its capability to transform how IT Departments deliver services to the business. There is increasing pressure on IT to deliver superior services at a reduced cost and backed by internal SLAs. Cloud computing holds the promise of delivering this.

However, moving to cloud computing is not without operational and business risk. Many IT Managers prefer to retain control of their data centre resource, ruling out public cloud solutions. Migrating to a private cloud diverts significant focus and resources to technology evaluation and implementation.

Logicalis' Managed Vblock offering delivers dedicated and scalable cloud computing infrastructure, backed by an OpEx pricing model and 24x7 monitoring and management. Our approach provides immediate cost reduction and operational efficiency and lets customers make the move to cloud computing without the risk.

Moving to the cloud will free up between 35% to a whopping 50% of operational and infrastructure resources for reallocation elsewhere. – Gartner

A Logicalis Managed Vblock offering delivers organisations with cloud computing for a predictable monthly fee:

- **Dedicated infrastructure:** On-site Vblock/s deliver a scalable infrastructure platform, which can be rapidly expanded as your business grows
- **OpEx model:** Infrastructure, migration of applications and data and support is provided for a monthly fee
- **24x7 management:** Monitoring and management backed by Logicalis' Global Support Centre. We provide capacity planning, configuration and performance management and a unique Web-based application that gives customers complete visibility into the performance of the infrastructure.
- **Retain software investment:** Existing software licences can be utilised (or new licences can be included).
