

Securely extend your network. Improve productivity with Anywhere, Any Device access.

The “office” is no longer a physical location. Mobile workers are accessing the corporate network from a range of mobile devices. More employees are working from home and expecting the same tools they have at work. Major corporations like Suncorp Metway have embraced the concept of “Bring Your Own Device”, xYOD or COPE – enabling staff to work on any device.

There is a clear trend towards providing greater flexibility for how workers access the network, from enabling personal devices to offering a choice of end points.

- A recent Gartner survey found that BYOD models were gaining mindshare amongst US, Germany and UK-based IT managers, with 10-12% of users already using their own technology
- Over 80% of organisations will support personal iPads and 50% expect their organisation to purchase them in a survey conducted by Citrix (over 80% will purchase and use the iPad for business).

This brings significant benefits to businesses, including reducing the Total Cost of Ownership of providing and supporting a laptop by 15-25% and improved productivity. It also generates greater employee satisfaction.

However, it does bring a different set of risks and challenges that the IT department needs to address through appropriate policies and security framework.

“There are major changes happening in the world of personal computing devices which are prompting corporate Australia to rethink its approach to managing its IT environments.” – Blake Dawson

Let Logicalis help you make your employees be more productive.

- **Review or develop a security policy** that enables an enterprise mobility policy (employer or employee provided devices) or a transition to a virtual desktop computing environment
- **Extend your Disaster Recovery capabilities** by allowing employees to securely access the network and continue working remotely (such as from home) in the event of a disaster
- **Enable mobile devices** such as tablets to access the network securely, with full managed solutions that deliver any applications to any device.
