

Data Centre Assessment

Objective review of your Data Centre

Logicalis' Data Centre assessment provides an objective review of your environment in terms of its ability to perform and support your mission-critical applications.

Why a Data Centre Assessment?

Many data centres have become either obsolete or are currently operating inefficiently due to the extreme technological advances of computing equipment, and an aging support infrastructure not designed for today's IT environment. Support for critical enterprise applications and converged communication systems has created unparalleled expectations for uptime availability and performance of these facilities, often leaving IT departments and facility groups struggling to keep pace.

Logicalis can help bridge the gap between IT and facility infrastructure to examine your situation and create solutions.

What does it cover?

Logicalis combines on-site surveys and data collection with off-site analysis and bench-marking

- Perform a site survey where consultants will interview and collect data covering your mechanical, electrical, structural, life safety and communications infrastructure.
- Review the data centre operational procedures based on ITIL Industry best practices.
- Review the operational support and readiness of your data centre support teams.
- Prepare a clear view of where your overall consumption levels are, what your growth potentials are, and how to achieve those.

The assessment will identify and evaluate all vulnerabilities that could adversely affect the data centre's operational performance.

Inclusions

- On-site and off-site consulting services
- Targeted information exchange and scoping workshop prior to on-site work.
- Level-1 Site Survey and Assessment led by a certified Logicalis data centre consultant.
- 1-2 days of focused, onsite work including direct interviews with IT and facility personnel.
- Detailed documentation with on-site consultation and recommendations.
- Site survey tool set.
- 3 – 5 days of analysis, options, vetting, report development and documentation delivery.
