

Virtually Optimised?

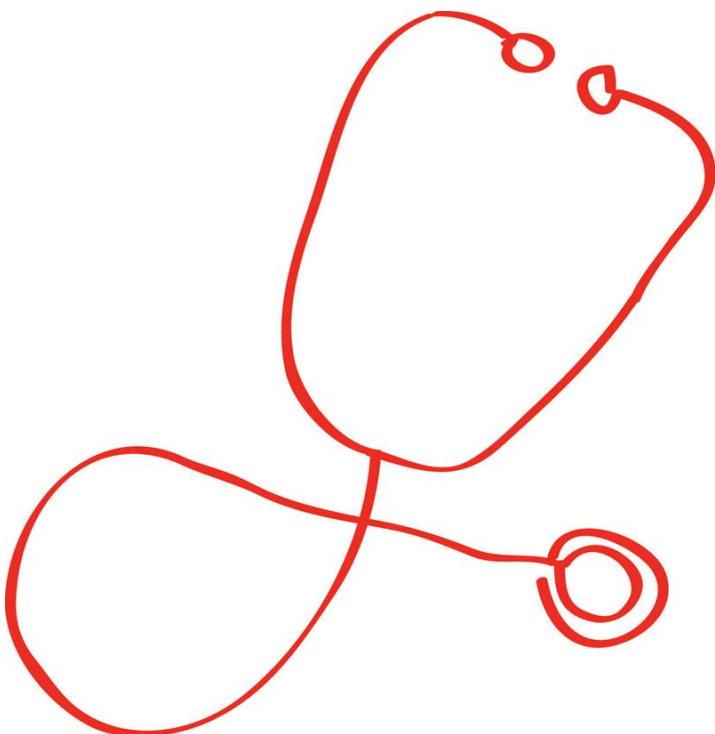

Maximise your VMware efficiency with a VMware Health Check

Logicalis' VMware Health Check ensures that your virtual infrastructure continues to follow best practices and employs the latest in virtualisation solutions. This is an essential step to attaining the highest possible return from your investment in VMware and maximising the productivity gains that virtualisation can bring to your organisation.

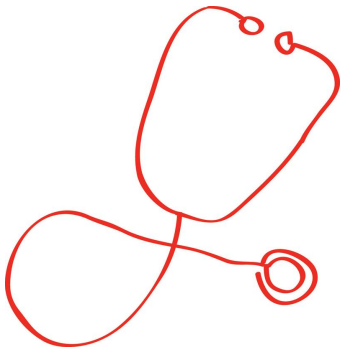

The introduction of new virtualisation technologies provides an increasing catalogue of business-enabling capabilities. As your virtual infrastructure evolves to meet your business needs, it will be necessary to re-assess how your VMware solution is configured and operated.

A Logicalis VMware Health Check covers four areas:

- **Business alignment.** We verify that your business requirements are being met by your virtual infrastructure
- **Performance and Capacity Review.** We examine the current state of your virtual infrastructure to verify that it is performing optimally
- **Best Practices Assessment.** We compare the existing state of your virtual environment with industry best practices
- **Technology Adoption.** Where applicable, we will provide recommendations for the adoption of VMware solutions that will help you address your strategic business objectives

“Many organizations tend to deploy server virtualization first and then try to optimize their investment.” – Enterprise Strategy Group

A VMware Health Check provides assurance that your virtual infrastructure is meeting your business requirements:

- Assessment of how the existing virtual infrastructure has been deployed against VMware best practice recommendations
- Assessment of how the existing virtual environment is operated and managed
- Review of your virtual infrastructure business continuity capabilities, including image backup, high availability and fault tolerance solutions and site to site failover
- Assessment of the performance and capacity of your virtual environment
- Review of your VMware management tools
- Audit of your VMware licensing, upgrade and support options
- Gap Analysis between business objectives and the functionality of your virtual environment
- Recommendations to improve the performance, reliability, management and security of your virtual environment
- Roadmap for the adoption of additional virtualisation technologies that will help to more efficiently and accurately meet your business objectives.
