

Securely extend your network with Logicalis' Wireless Assessment

The proliferation of mobile devices, benefits of enabling workforce mobility and user expectations of “connecting anywhere” are driving accelerating growth in Wireless LANs. Logicalis' Wireless Assessment provides an objective review of your mobility policy, security and WLAN environment.

- What is in your wireless network? Is it secure? Working at peak efficiency?
- When was your mobility policy last updated? (Do you have one?)
- Does your Wireless LAN support voice? Video? Guest access?

Security and Policy

- Review mobility policy against current and planned business requirements
- Ensure policy enforcement defines which devices access the network.

Know the environment

- Identify any signal leakages and unknown wireless transmitters
- Be aware of potential vulnerabilities in your wireless environment
- Ensure that bandwidth is adequate to ensure no performance loss to users
- Identify coverage areas, dead spots, and the effectiveness of AP locations.

Network Refresh

- Ensure the wireless network complies with appropriate standards and is using the latest wireless standards.
- Determine external interference noise sources (active & passive)

Enhanced Services Readiness

- Assess if the wireless environment is VoIP and Video ready
- Review readiness for services like Guest Access and Inventory Tracking.

“As companies increase their spending on wireless... managing service costs, security and procurement has become critical. However, many companies still do not have thorough wireless usage policies.” – Gartner

The Wireless Assessment reviews the business case for mobility and combines this with technical analysis and recommendations. It provides you with detailed information on the wireless air space in and around your office environment.

Inclusions

- Two-hour scoping workshop
- Interviews with key stakeholders to understand and document current requirements and review policy
- On-site wireless site survey
- Off-site preparation of analysis and recommendations.

Deliverables

- Recommendations on developing a mobility policy
- Report on current infrastructure (risks, performance and capacity assessment)
- Roadmap on “best practice” infrastructure to address business requirements with budgetary pricing.
- Detailed information on the Access Points and Coverage in the workspace, including Maps of Radio Frequency (RF) coverage, overlapping areas and dead spots
- Detailed Analysis and Deployment Guidance of infrastructure.
