

Logicalis provides unique solutions to Business Issues and Challenges in ICT infrastructure

Logicalis provides IT infrastructure solutions that address business issues and enable organisations to gain greater business value from their IT investment. Our expertise helps transform business operations – making them more flexible, efficient and productive. We work with customers across the corporate and government sectors to achieve these outcomes.

Our value is in translating technology into business outcomes: we're experts at aligning IT solutions with business strategy. This enables us to bring strategic and operational value to customers by delivering solutions that are easier and more cost-effective to support and deliver greater business agility. We can help you to migrate to "Tomorrow's Workplace" that delivers the same collaborative experience in a traditional client/server model, implement a more efficient network infrastructure or design a data centre that reduces operational cost.

All of our capabilities are delivered via an on-premise, managed or hosted/cloud model. This enables us to match the most appropriate commercial and delivery model for your business requirements. Our integrated solutions embrace collaboration, storage, security, server and IP networking – and we partner with the likes of Cisco, Citrix, Microsoft, NetApp and EMC to deliver the most appropriate technology in a flexible, cost-effective way.

In a world of increasing technology complexity, we focus on building a roadmap that addresses fundamental organisational challenges.

We help customers address fundamental questions about their IT infrastructure and whether it is meeting business requirements and user expectations:

- Is the existing infrastructure capable of delivering the performance, availability, capacity and security to deliver new and existing service requirements?
- Are there adequate skill sets in house to support new and existing requirements?
- Are risk mitigation strategies and policies in place to minimise and promptly respond to loss of service to protect the business?
- How can IT deliver improved services and enable increased staff productivity? (Are staff getting a better experience at home on their personal devices than they are in the office?)
- Are new delivery models such as cloud computing or IT-aaS able to deliver greater ability and allow a focus on core initiatives rather than context?

Our value to customers is built on:

- Tier 2 flexibility and agility with Tier 1 capability: extensive experience and expertise across IP networking, unified communications and collaboration and data centre technologies
- Customer-first culture: we never walk away from a problem
- Only Tier 2 system integrator with an offshore capability to reduce your IT costs
- Service capabilities (including managed services and Cloud) that reduce risk and cost, and allow customers to focus on their core business.

What can we do for your organisation
